

# Local Installation Guide

## Step1. Install Python

[Python Website](#)

## Step2. Clone our project from github

[Project Repository](#)

## Step3. Install environment via requirement.txt

```
cd backend
pip install -r requirements.txt
```

## Step4. Run the project

```
python __init__.py
```

Make sure you run the file in `backend` directory.

Open the url: <http://127.0.0.1:8080/> and you will see the website.
